

Simplist® Storage Resource

Storing Fresenius Kabi Simplist Prefilled Syringes in Omnicell® XT Automated Dispensing Cabinets

When adding Simplist syringes to the Omnicell XT Automated Dispensing Cabinet, use empty bins or optimize existing inventory with the following steps.

1. Work with the appropriate pharmacy personnel to generate the Omnicell XT Automated Dispensing Cabinet Reports listed below and identify:
 - Empty bins
 - Unnecessary medications without active orders
 - Medications with long days unused and/or are not considered standard/emergency medications, at the pharmacy's discretion
2. Determine the desired Simplist products to be stocked and the desired PAR level
3. Use the product fit guide to determine the pockets needed to meet the PAR level for Simplist products
4. Remove the existing inventory from the designated bins and restock with the selected Simplist products

Omnicell XT Automated Dispensing Cabinet Reports

OmniCenter Report	Description
Inventory Aging	Manages space and costs by identifying items that age. Lists items that have remained unused for a specific number of days per cabinet. Each item displays the date and time of its most recent issue and total count.
Par vs. Usage	Lists item usage statistics within a date range to identify usage frequency. Evaluates par levels and reorder amounts accordingly. Items not issued or used infrequently are listed at the end of the report.
Pharmacy Drawer Configuration	Lists drawers, bins, and assigned items inside pharmacy drawer carriers. Identifies available space or like items in the same drawer.
Stocked Items Without Active Med Orders	Lists pharmacy items that have no active medication orders, to identify those that may be removed from a specific area.
